## About the company

**CREATIO INDUSTRY** is a trading company specialized in cutting-edge technologies for industry. Our main product, which is the fire detection system based on the linear temperature sensors, has enabled us to build a strong nationwide customer and partner network on the fire protection market.

This innovative technology combined with comprehensiveness and high quality of our services including design, installation, technical support, service and maintenance has won us trust of many significant industrial companies in such sectors as mining, power and heat generation, construction and various fields of production.

Our organization based on Lean Management Principles makes our operation particularly flexible and cost-effective. That combined with our customer and product oriented approach to business provides us with great opportunities even in our current rather unfavorable economic climate.

Driven by the market trends characterized by increasing comprehensiveness and versatility of products and services we are searching for the suppliers who would complement our offer with innovative solutions in fire detection and extinguishing, low current and electrical systems which would appeal to our regular and new customers and for new partners who would implement our products in new projects all over the country.

## 10 reasons which make us appropriate partners for You

1. 7-year experience in fire detection market, mostly with industrial applications.
2. Cooperation with the unique technologies manufacturers such as LISTEC GmbH, Argus Security S.r.l. and EBO S.A.S. marked by numerous successful applications at new and already existing facilities.
3. Company policy focused on maintaining excellent long-term relationships which results in development of a strong and constantly increasing network of customers and licensed partners in industrial sector.
4. Our engineering knowledge and applied software (AutoCAD) which enables us to cooperate with engineers and designers on a professional level.
5. Customer orientation – all the products and services are designed to meet real needs and expectations of our Customers which is priority in our business.
6. Our quality-focused approach means impressive reliability of our products and services which is so highly valued on industrial market. Our products can be integrated with the building protection systems such as GEMOS which provides a full control over their operation in a given facility.
7. Turnkey services provided to our Customers who has trusted us include design, installation, technical support, training, guarantee and post-guarantee service&maintenance. Our Customers can always rely on our assistance.
8. Active participation in current events on the fire systems market enables us to promote our products widely through presentations and training courses at trade fairs, conferences and other events thereby reaching our target market.
9. Careful observation of construction projects map and long-term relationships with many Project Managers and General Contracting companies which provide us with good opportunities to apply our products in new projects.
10. Small size and application of Lean Management Principles in our operations which make us particularly flexible and cost-effective.

## Our main products

**LIST = Linear Sensor Temperature Control** is the system designated for fire and frost detection and precise measurement of temperature level and temperature difference based on the sensors encapsulated in the **sensor cable**. Thanks to its features it makes a perfect solution for hard accessible areas with unfavorable conditions such as road tunnels, mines, industrial plants or ships.

**Sagittarius** wire to wireless offers a convenient, yet reliable method for economically extending existing or new, hardwired intelligent fire detection systems. **Sagittarius** system is particularly suitable for areas of high architectural sensitivity or where access is restricted. The wire free installation of components allows rapid installation and minimal disturbance of the surrounding area.

**EBO System** – cable management system composed of cable trays and ladders made of **Glass Reinforced Polyester**. The solution is characterized by the highest corrosion-resistance, low specific gravity, very good insulation parameters and mechanical reluctance. Its well-designed construction makes it possible to install it without using specialized equipment. It is designated particularly for the areas with chemically aggressive atmosphere causing corrosion.

Solutions  
for industry

## What we are looking for

We are open to new technologies and in constant search for new products which would complement our offer, especially in fire detection and extinguishing area as well as in other fields related to electrical and low current systems.

The products to be introduced in our offer should be based on innovative technologies adjusted to operate in heavy industry facilities and flexible enough to create individual applications for our Customers.
